Circular economy – new action plan to increase recycling and reuse of products in the EU

Dear Commission

It is positive that the new action plan for circular economy are focusing on the construction sector. This being said it is important that the Commission look into getting building legislation to deal with recycled and recycled building materials. There are many standards that can already handle recycled materials, but there are shortcomings as well. We need to use the system that is in the norm system today with national building legislation - Eurocodes - Product standards (CE marking and building regulations) - Testing standards, but overall, the gaps must be filled in for recycled materials.

When implementing this it is important that You get some experts with knowledge of construction law to implement the additions and not the standardization bodies.
